## TO WHOM IT MAY CONCERN

All Add-A-Bathroom bathroom, shower and toilet pods that are supplied with a hot and cold pipe kit have been pressure tested in our factory prior to dispatch.

The pipe kits are pressure tested in accordance with the manufacturers instructions and are tested to a constant of 1500 KPA (220 PSI) for a minimum of 30 minutes.

However as per our installation instructions all pods should be re pressure tested on site by the installing plumber to ensure no damage to the pipe work has occurred during transportation and subsequent site handling.

Where the pod is supplied as a 'flat packed' unit kit then the installing plumber will need to reconnect numerous items and therefore will need to check their work also. The site plumber is responsible for certification of the installation of this item.

Please ensure the installers have been given a copy of the appropriate installation instructions and they are read and understood prior to the commencement of installation.

Copies of all relevant instructions are available via the Add-A-Bathroom web site at [www.addabathroom.com.au](http://www.addabathroom.com.au) or by contacting one of our Tech Team members on 1300 559 121.

Our team is available during normal business hours to answer questions should any arise prior or during installation, please don't hesitate to call.

We remain at your service.

John Arnold  
Managing Director
